

Taro Mihn

taro.mihn@example.com · +81 90-1234-5678 · Tokyo, Japan

Summary

Software engineer with about 12 years of experience centered on web application development. Starting in embedded systems and moving through contract development, I now own the backend and cloud platform of a SaaS product end to end.

I am comfortable driving work from requirements through to operation, and I enjoy improving a team's development process.

Skills

- Backend development in Go and TypeScript
- Design
- Microservice design
- CI/CD
- Technical and engineering management (requirements)
- Embedded Linux development (kernel)

Experience

CloudTech Inc.

Apr 2020 - Present

Backend Engineer / Tech Lead

Development and operation of a SaaS product, owning the backend and cloud platform.

- **Business management SaaS API (Apr 2020 - Present)**

Backend (team of 5)

Tech: Go / AWS / PostgreSQL / Terraform

Designed and built APIs in Go and operated the AWS infrastructure, continuously improving availability and performance and gradually evolving the architecture to handle growing traffic.

- **Billing and subscription platform (Oct 2021 - Jun 2022)**

Design and implementation lead

Tech: Go / AWS Lambda / DynamoDB / Stripe

Designed and built a new subscription billing platform, integrating a payment provider and modeling complex requirements such as plan changes and proration.

- **Observability and SLOs (Jul 2022 - Present)**

SRE (part-time)

Tech: Datadog / Terraform / AWS

Defined SLOs, built dashboards and alerts, standardized the incident response flow, and reduced the mean time to recovery.

SampleSoft Co.

Apr 2016 - Mar 2020

Software Engineer

Web application development for client projects, owning design through operation across several engagements.

- **E-commerce site development and maintenance (Apr 2016 - Mar 2018)**

Full-stack (team of 4)

Tech: TypeScript / Node.js / MySQL

Owned the full cycle from requirements to release, and improved product search and cart features to lift the conversion rate.

- **Recipe app backend (Apr 2018 - Jun 2019)**

Backend

Tech: Go / AWS / MySQL

Built the backend of a mobile recipe app from scratch, implementing batch jobs and APIs that handle large recipe datasets.

- **Internal admin console rebuild (Jul 2019 - Mar 2020)**

Front-end and back-end

Tech: TypeScript / React / Go

Incrementally rebuilt a legacy admin console, migrating the front-end to React and reducing operator workload.

Mihon Devices Inc.

Apr 2013 - Mar 2016

Embedded Software Engineer

Firmware and device-driver development for embedded equipment.

- **Network device firmware (Apr 2013 - Mar 2015)**

Firmware

Tech: C / RTOS

Developed network device firmware in C, optimizing for constrained memory and building quality for long-term operation.

- **Linux device driver development (Apr 2015 - Mar 2016)**

Device drivers

Tech: C / Linux Kernel

Implemented Linux device drivers for a new board, investigating and debugging the kernel to achieve stable hardware operation.

Education

2009 4	Entered Mihon Institute of Technology, B.Eng. in Information Engineering
2013 3	Graduated, Mihon Institute of Technology

Certifications

- AWS Certified Solutions Architect – Associate
- AWS Certified Developer – Associate
- Applied Information Technology Engineer (Japan)
- TOEIC 850

Publications

- Spoke on microservice migration at a tech conference
- Authored internal engineering blog posts on backend design
